Driver's Guide:

Configuring Wi-Fi

(MDT3500/3200 and Android Tablet)

Configuring WiFi

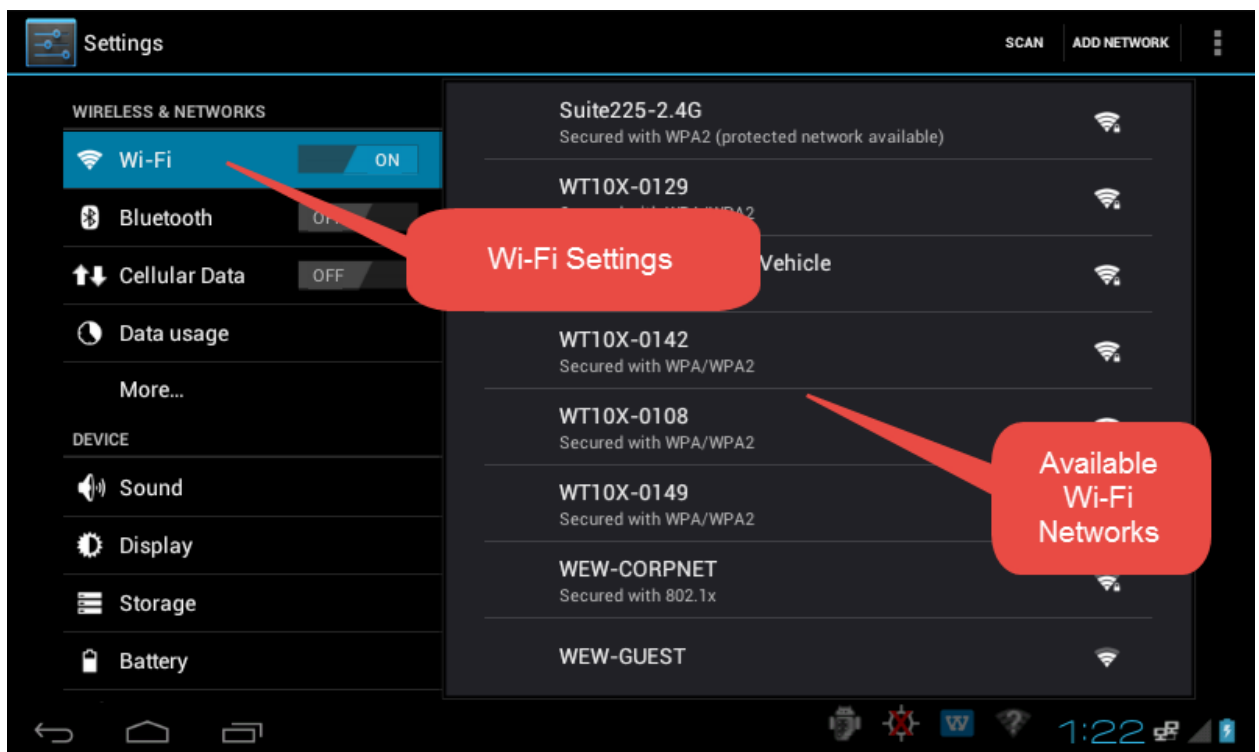

About

Wi-Fi connects your device (MDT or Android Tablet) to the vehicle's locator. Without it, you will not be able to automatically track driving and on-duty hours, send or receive important messages, or submit vehicle inspection reports to Dispatch.

Setting Wi-Fi

Here's how to set up Wi-Fi on an MDT or Tablet:

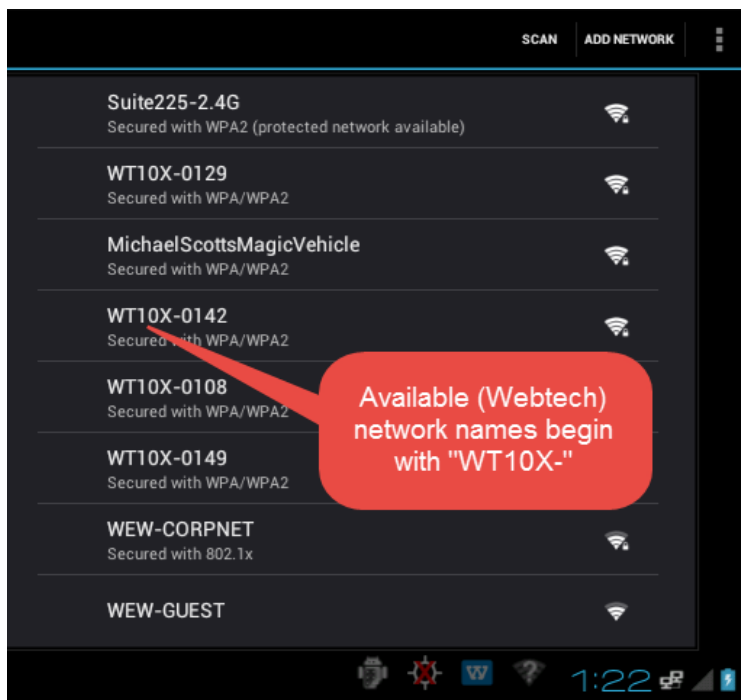

1. Turn on the vehicle.
2. Go to **Settings**→**Wireless & Networks** and tap **Wi-Fi**. Move the slider to **ON**. A list of available networks appears:

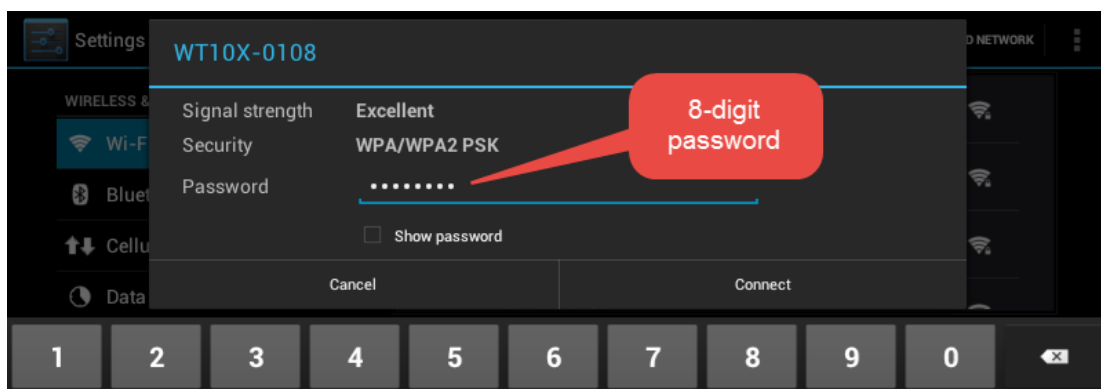

Configuring WiFi

In the list of available networks, look for a name beginning with **WT10X-:**, followed by ####, **where #### is the last four digits of the Locator serial number.**

Note: The WT10X Locator serial number is available on the WFC portal under **Administration**→**Vehicle Administration**→**Standard Attributes**, and also appears on the back of the Locator itself.

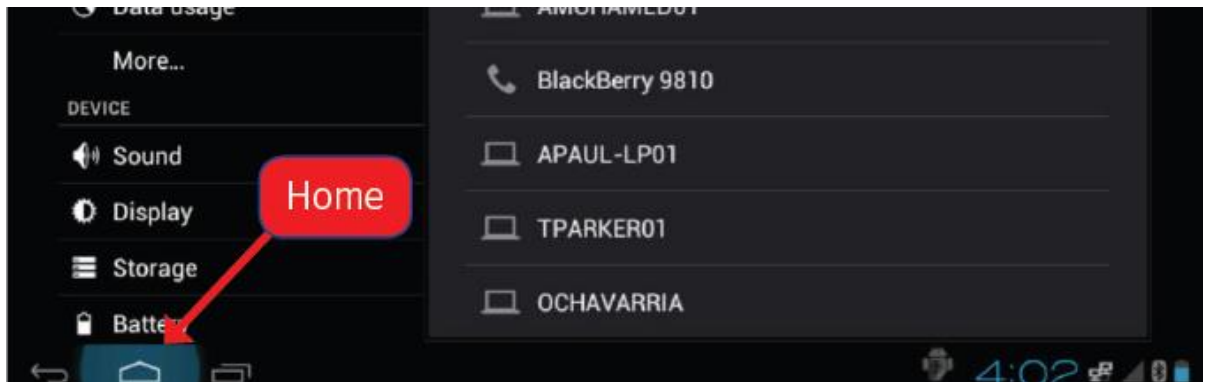

3. Tap the **WT10X-####** network name to begin the connection process. Enter your **8-digit password (Locator serial #)** and tap **Connect** when finished:

Configuring WiFi

4. Tap **Home** at the bottom left corner to return to your Home screen:

5. Launch the **Webtech Driver Center** application to verify your network connection was successful.

Note: *If the network connection failed, you'll see the connectivity icon flashing red at the bottom left corner of the screen. You'll need to repeat the connection process, or call Technical Support for assistance.*

When you've successfully connected the device, the connectivity icon stops flashing:
