

# Manually Setting Date & Time on MDTs

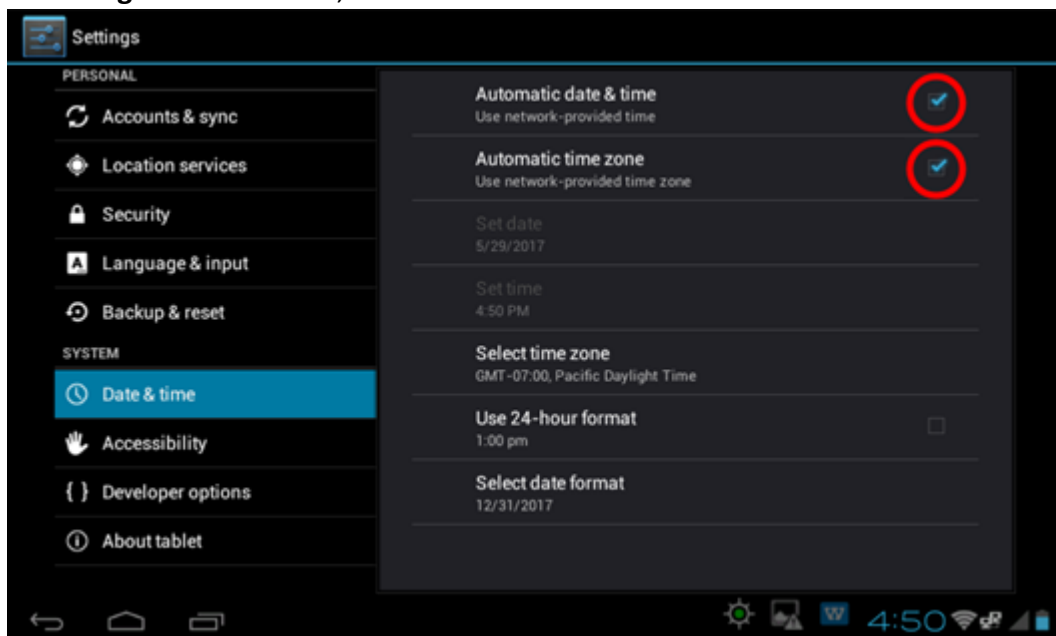

Sometimes, MDTs can lose their clock settings. You can manually correct the MDT clock before using Driver Center to ensure your logs are HOS compliant.

Here's how:

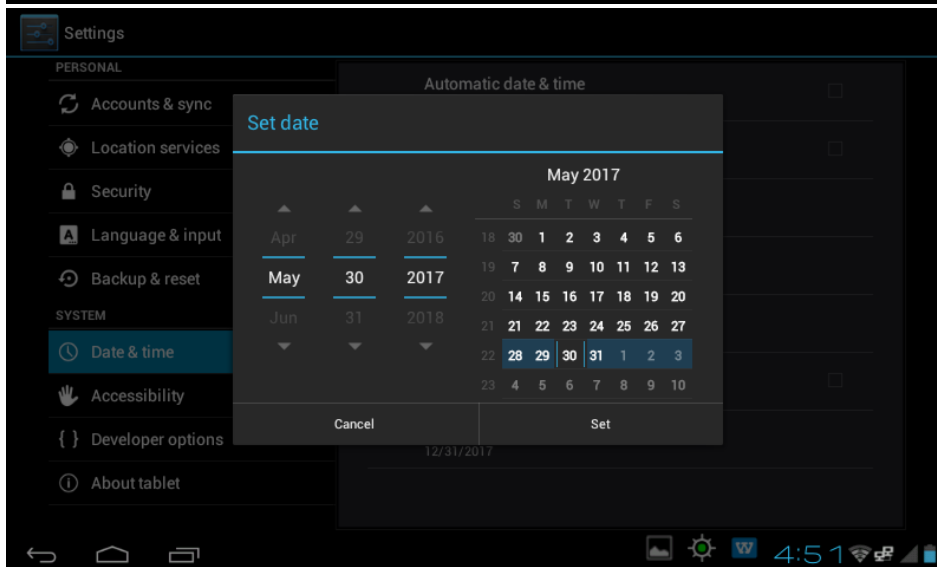

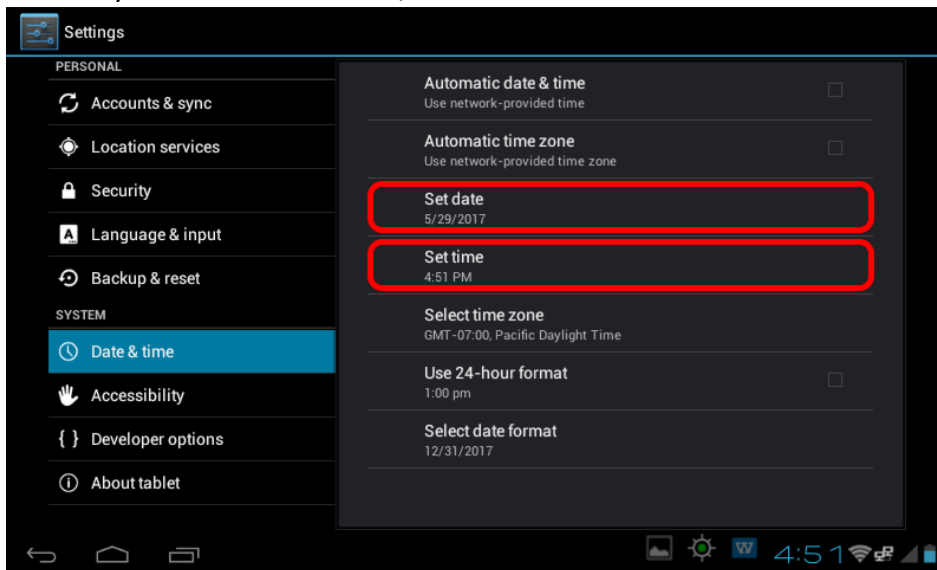

1. If the MDT clock gets reset, you will see the following dialog when you open Driver Center. Tap **Set Date & Time**.

2. In **Settings > Date & time**, clear the **Automatic date & time** and **Automatic time zone** checkboxes.

3. Manually correct the date and/or time.

4. Once the date and time are correctly set, re-enable the **Automatic date & time** and **Automatic time zone** checkboxes.
